Clay Tablet Connector for Adobe Experience Manager

Version 2.3.3

Release Notes

February 5, 2015

Overview

Welcome to the Clay Tablet Connector for Adobe Experience Manager ("Connector"). The Connector enables you to automate sending and retrieving content from your Adobe Experience Manager CMS, which dramatically reduces the effort required to create, maintain, and publish Web content in multiple languages.

How to Contact Clay Tablet Support

System Requirements

The Clay Tablet Connector for Adobe Experience Manager ("AEM") must be installed on the AEM Author server. The Clay Tablet Connector for AEM supports AEM versions 5.6.1 and higher.

The Clay Tablet Connector for AEM has no additional hardware or software requirements beyond those of AEM. For detailed requirements, refer to the appropriate version of the *Adobe Experience Manager Technical Requirements*.

Issues Fixed in This Release

Issue ID	Description
AEM-408	**User-error scenario:** There are multiple translation providers. A user sends out content for translation to a specific translation provider. While that provider is sending out the content, the user deletes the provider from the Connector. Now, when this user error occurs when using the Microsoft SQL Server database, the error is displayed to users, and the **Error Info** column is displayed in the **Status** tab of the **Translation Status** page. Previously, when this user error occurred, the following problems occurred when using the Microsoft SQL Server database: ■ Sending out content for translation was stuck at 1%. ■ In the **Status** tab of the **Translation Status** page, the **Notes** column was displayed instead of the **Error Info** column. This column did not display meaningful information about the error. ■ In the **Job Errors** tab of the **Translation Status** page, `Can't find related LSP for job` was displayed. **To apply this fix to an upgraded Connector installation:** ▶ Run the `CTC_MsSQL_2.3.3_Update_TranslationError_Column.sql` script. To obtain this script, please contact Clay Tablet Support.
AEM-409	**User-error scenario:** There are multiple translation providers. A user sends out content for translation to a specific translation provider. While that provider is sending out the content, the user deletes the provider from the Connector. Now, when this user error occurs, the Connector writes a single error to the log file. Previously, when this user error occurred, the Connector wrote multiple errors to the log file.
AEM-412	When using the On-Premise Platform with the Connector and sending out content for translation from the AEM Sidekick, the name of the translation provider is now displayed correctly in the **Status** tab of the **Translation Status** page. Previously, in this scenario, `Internal Platform based LSP` was displayed instead of the name of the translation provider.
