

# Lionbridge Connector for Adobe Experience Manager

Version 4.0.1

## Release Notes

November 20, 2019

### Overview

Welcome to the Lionbridge Connector for Adobe Experience Manager (Connector). The Connector enables you to automate sending and retrieving content from your Adobe Experience Manager CMS, which dramatically reduces the effort required to create, maintain, and publish Web content in multiple languages.

### How to Contact Lionbridge Connector Support

Telephone: +1-416-363-0888

You can submit a support ticket either:

- by email: [connectors@lionbridge.com](mailto:connectors@lionbridge.com)
- from the Lionbridge Connector Zendesk page, using your web browser: <https://connectors.zendesk.com/>

For more information, visit:

[http://connectors.lionbridge.com/docs/Common/Support\\_Liox.htm](http://connectors.lionbridge.com/docs/Common/Support_Liox.htm)

## System Requirements

The Lionbridge Connector for Adobe Experience Manager must be installed on the Adobe Experience Manager Author server. The Lionbridge Connector for Adobe Experience Manager supports Adobe Experience Manager versions 6.2 and higher.

The Lionbridge Connector for Adobe Experience Manager has no additional hardware or software requirements beyond those of Adobe Experience Manager. For detailed requirements, refer to the appropriate version of the *Adobe Experience Manager Technical Requirements*.

## What's New?

- The `PrepopulateLocalTM.Utility` utility was updated to support Adobe Experience Manager versions 6.2 and higher.
- The new `usingCacheService` property in the `/etc/ctctranslation/debug` node in CRXDE Lite enables you to enable and disable the cache service.
- In the new **Skip URL Conversions for Node Properties** text box in the **Prevent URL Conversions** section in the **Advanced Settings** page, you can specify node properties and paths to skip when converting URLs.
- In the new **Skip Translation with Local TM** section of the **Advanced Settings** page, you can configure which components or property names of components will be ignored by the local TM (translation memory) when users send content for translation with the **Use Local TM** option. This setting prevents the Connector from using any previous translations of the specified components that are stored in the local TM.
- The Connector no longer supports versions 6.0 and 6.1 of Adobe Experience Manager.
- The **Disable default language mapping (6.1+)** option in the **UI and Default Settings** section of the **Configuration** page has been renamed to **Disable default language mapping**, because it is now relevant for all supported versions of Adobe Experience Manager.

## Issues Fixed in This Release

Issue ID	Description
258722	When using the Connector with AEM 6.4 or 6.5, the <b>Update</b> , <b>Delete</b> , and <b>Close</b> buttons in the <b>LSP &amp; Keys</b> page were not displayed properly. The introduction of the new <b>New Provider</b> and <b>Edit Provider</b> dialog boxes have resolved these issue.

Issue ID	Description
258723	Previously, in JSON-structured content, some Unicode characters that were escaped in the translation XML file were displayed in the translated content. This issue has been resolved.
258724	Previously, custom languages and codes were not displayed in the <b>Language Mapping</b> page. This issue has been resolved.
258725	In version 4.0.0 of the Connector, after clicking <b>Delete</b> for a license key in the <b>LSP and License Keys</b> section of the <b>LSP &amp; Keys</b> page, the license key was not immediately released by the Clay Tablet Platform, and it was not available for re-installation. This issue has been resolved. Clicking <b>Delete</b> for a license key now immediately causes the Clay Tablet Platform to release it and make it available for re-installation.
258727	Previously, when some encoded content was translated to Chinese, question marks ( ? ) were returned in the translated content. This issue has been resolved. All translated content is now encoded to Base64 before it is saved to the Connector database, which prevents this situation from recurring.
258728	Previously, when the Connector imported a .CSV file to the <b>Component Mapping</b> page, it did not recognize that the first row was a header and not actual data, so it imported all fields as data. This issue has been resolved. The Connector now recognizes both <code>ComponentPath</code> and <code>PropertyName</code> as headers. For more information about supported elements of an imported .CSV file, refer to the <i>Lionbridge Connector for Adobe Experience Manager Installation Configuration Guide</i> .
258729	Version 4.0.0 of the Connector did not support sending out content for translation from version 6.5 of the Adobe Experience Manager Sidekick, and an error message was displayed. This issue has been resolved.
258731	Version 4.0.0 of the Connector required connecting to the new Clay Tablet license server, which did not support the preemptive authentication required by some proxy servers. This issue has been resolved. The new Clay Tablet license server now supports preemptive authentication.
258733	After version 4.0.0 of the Connector was installed on Adobe Experience Manager version 6.5, adaptive-form fragments were not editable in the Touch UI, and error messages were displayed. This issue has been resolved.

Issue ID	Description
258734	<p>In version 4.0.0 of the Connector, if JCR properties were specified in the <b>Metadata Configuration</b> section of the <b>Advanced Settings</b> page, then the metadata was not translated, and it was overwritten by the source content.</p> <p>This occurred whether or not the <b>Translate Metadata</b> check box was selected or cleared in the <b>Translation Default Settings</b> sub-section of the <b>UI and Default Settings</b> section in the <b>Configuration</b> page. These issues have been resolved.</p>
276509	<p>Previously, in the <b>Component Mapping</b> page, selecting components and clicking <b>Collect</b> did not collect the selected components and display them in the <b>Collected Possible Property Fields for Translation</b> list. This issue has been resolved.</p>
283028	<p>Previously, the following scenario occurred when using the Lionbridge Translation Connector for Lionbridge Freeway:</p> <ul style="list-style-type: none"> <li>■ You specified analysis codes in Lionbridge Freeway.</li> <li>■ You renamed the analysis codes from their default names in Lionbridge Freeway.</li> <li>■ In the <b>Translation Platform</b> section, <b>Freeway Config</b> sub-section of the <b>Configuration</b> page of the Connector, you selected only the <b>Require Value 1</b> check box.</li> </ul> <p>In the <b>LSP</b> page of the Bulk Translation wizard, if Lionbridge Freeway was selected in the <b>Choose LSP</b> box, in the <b>Analysis Code</b> section, the Connector selected the first analysis code in alphabetical order instead of selecting the analysis code originally named <code>Analysis Codes 1</code>. This issue has been resolved</p>

## Known Issues

Issue ID	Description
283021	By default, the Connector caches all the files for translation and all received translation files. To instruct the Connector <i>not</i> to cache these files, edit <code>/etc/ctcpipelineconfig/ctcTranslationPipes.xml</code> in CRX and follow the instructions in the comments in that file about how to comment out or enable particular steps in the Pipeline to meet your needs. Starting in version 2.5.0 of Connector, the files are stored in the database, so you should update the <code>DeleteLocalTranslationFile</code> pipeline step to remove cached files from the database instead of looking in the file system. For updated instructions, please contact Lionbridge Support.
283022	When using Adobe Experience Manager 6.2, some pages and dialog boxes that are slow to load are blank instead of populated with data. This is caused by an issue in Adobe Experience Manager 6.2. You can contact Adobe Support to receive a hotfix for this issue, which will be fixed in an upcoming Adobe maintenance release.
283025	In versionx 3.3.x of the Connector, after removing a user from Adobe Experience Manager who still had jobs in the Translation Queue, users cannot open the queue, and an error message is displayed.
283026	When using the Microsoft SQL Server database, monitoring a job from within Adobe Experience Manager that was sent using Adobe's Translation Integration feature initially displays the job status as <code>Committed for translation</code> , but that automatically changes to <code>Cancel</code> .
283029	In the Translation Queue, clicking a link in the <b>Page</b> column displaying the path and name of a Content Fragment does not open that fragment in a new browser tab. Instead, the browser tab displays a 404 error.
283030	The <code>Sample_CT_Workflow_Translation</code> workflow add-on is not supported in the current release. Therefore, you cannot use this workflow to send content for translation, either from the Inbox or from Sidekick.
	When the add-on for Lionbridge Freeway is installed, Freeway-specific fields are displayed in the second page of the Sidekick wizard even when Lionbridge Freeway is not selected as the translation provider (LSP).
