1 Welcome to the Lionbridge Connector for Hybris

Welcome to the Lionbridge Connector for Hybris ("Connector"). This is Lionbridge's connector between Hybris and the Clay Tablet Platform.

1.1 Terminology

Amazon AWS	Amazon Web Services. A suite of web application products developed and sold by Amazon.com. Clay Tablet uses various AWS offerings in order to leverage their infrastructure and build rich, dynamic solutions for its customers, specifically, the Clay Tablet Platform. For details, see http://aws.amazon.com .
Amazon S3	Amazon Simple Storage Service. For details, see: http://aws.amazon.com/s3/ . The Connector and the Clay Tablet Platform use Amazon S3 to provide temporary storage services for the content sent to and from translation.
Amazon SQS	Amazon Simple Queue Service. For details, see: http://aws.amazon.com/sqs/ . The Connector uses Amazon SQS to provide Message Queue Services.
Asset	A content item that you manage using Hybris, for example, supported Hybris business objects.
Clay Tablet (CTT)	Clay Tablet Technologies, a Lionbridge company, and the corporate entity that publishes the Connector and the Clay Tablet Platform.
Clay Tablet Platform	The hosted (IaaS) connectivity platform that receives and routes content from content providers to translation providers and back during implementation. Clay Tablet Technologies, a Lionbridge company, configures the Platform based on the number and nature of systems involved in your system architecture.
Freeway	The name of the Lionbridge translation portal for submitting content to and retrieving content from the Lionbridge translation provider.
FTP Server	File Transfer Protocol (FTP) is a standard network protocol used to transfer files from one host to another host over a TCP-based network, such as the Internet. Translation providers may receive and send files for translation using an FTP server.
IaaS	Infrastructure as a Service. The Clay Tablet Platform is an IaaS, because it is a hosted platform.

Keys	<p>The Connector uses keys to establish a secure, discrete connection between the Connector instance and the Platform.</p> <p>Very important: Do not copy the CMS address keys to multiple hybris instances, because this is a violation of the License Agreement. Using the same CMS address keys on multiple hybris instances will cause the Connector to behave unexpectedly, which can result in lost translation content, orphaned projects, and inaccurate translation status reports. Clay Tablet will support technical issues caused by duplicating or incorrectly installing CMS address keys only on a time and materials basis.</p>
Lionbridge	The publisher of the Freeway translation portal and a translation provider. Users connect to the Freeway translation portal to submit content to and retrieve content from the Lionbridge translation provider.
Lionbridge Connector for Hybris ("Connector")	The connector software that Clay Tablet Technologies, a Lionbridge company, has developed and provides, which plugs into your Hybris installation to provide connectivity to our hosted Platform. In this document it is referred to as the Connector. This is the software you are installing and configuring as you work through this document.
MT	Machine translation. The translation provider can be a machine translation service, such as Google Translate.
On-Premise Platform	A version of the Clay Tablet Platform that is hosted and managed by the Clay Tablet client, instead of hosted on AWS by Clay Tablet.
Producer	CMS or another system that sends content or documents out for translation. In this case, this is Hybris.
Provider	A provider of translation services. The delivery of assets to the provider may be via an FTP server or a TMS connector.
Support Asset	Supporting documents and their metadata. Support assets are not translated by the translation provider, but they provide helpful context for the translator.
TMS	Translation management system that the translation provider uses.

1.2 About the Clay Tablet Translation Platform

Clay Tablet's translation connectivity platform is the easiest, most flexible way to integrate content systems, including content management systems (CMSs) and other content producers, with translation providers and translation technologies.

Clay Tablet Platform is the hosted (IaaS) connectivity platform that receives and routes content from content management systems to translation providers and back, including to Lionbridge via Freeway or onDemand. It is hosted on Amazon Web Services (AWS). During implementation, Clay Tablet Technologies configures the

Platform for your translation solution, based on the translation providers or systems you use. The Clay Tablet Platform uses the following services on AWS:

- S3 (Amazon Simple Storage Service), which provides storage services for the content sent to and from translation.
- SQS (Amazon Simple Queue Service), which provides message queue services.

1.3 How the Connector Works with Hybris

The Lionbridge Connector ("Connector") is an important part of the Clay Tablet translation solution.

The Connector is installed on your system as an add-in to Hybris. Its functionality is displayed to the users as part of Hybris.

Your translation systems architecture might look like the configuration above. It may have additional content producers or translation providers, but the core concepts remain the same.

During implementation, Clay Tablet works with you and your translation providers to configure and test the other elements of your translation solution, which are the Clay Tablet Platform's connections to your translation providers' systems.

1.4 Using this Guide

Purpose of this guide

This guide describes everything you need to know to install and configure the Lionbridge Connector ("Connector") for Hybris. It describes the delivery package contents, system requirements, installation instructions, and configuration procedures.

Recommendation: Review the user guide to fully understand the powerful features of the Connector.

Who should use this guide

This guide is intended for Hybris administrators and system integrators.

What you should already know

This document assumes that your company already has an installed instance of Hybris. It assumes that you have a strong working knowledge of Hybris and its features.

How to find out more about the Lionbridge Connector for Hybris

For information on using the Lionbridge Connector to send and receive content for translation from Hybris, read the *Lionbridge Connector for Hybris User Guide*.

Documentation conventions

This guide uses the following conventions:

Convention	Description
Bold	Highlights screen elements such as buttons, menu items, and fields.
<i>Courier</i>	Highlights input, file names, and paths.
<i>Italics</i>	Highlights terms for emphasis, variables, or document titles.
>	Indicates a menu choice. For example, "Select Translation > Translate Asset. "

1.5 How to Contact Lionbridge Connector Support

Email @: connectors@lionbridge.com

Telephone: +1-416-363-0888

You can submit a support ticket either:

- by email
- from the Lionbridge Connectors Zendesk page, using your web browser

To submit a support ticket:

1. Do one of the following:

- Email connectors@lionbridge.com, and cc (carbon copy) anyone to include in the ticket correspondence.

Important: Include the information and attachments in your email that are listed in the sub-sections below.

- Create a ticket in Zendesk:

- a. Open the Lionbridge Connectors Zendesk page in your browser: <https://connectors.zendesk.com>.
- b. Sign in to Zendesk. If you do not have sign-in credentials, see "[To view and update your support ticket in Zendesk:](#)" below.

Important: Include the information and attachments that are listed in the sub-sections below.

- c. Click **Submit a request**.
- d. In the **CCs** field, add anyone to include in the ticket correspondence.

Zendesk automatically creates a ticket and responds to everyone included in the cc field.

2. Everyone in the original cc receives updates unless they request to be removed from the ticket.

Important: Check your email spam folder (especially first-time Zendesk users) as sometimes email notifications from Zendesk are marked as spam.

When the issue is resolved, Lionbridge closes the ticket.

Information to include in the support ticket:

- client name
- CMS or content system name and version
- Connector or App version installed
- name of job for which the issue occurs
- date of job submission
- detailed description of the issue
- any error text—copy and paste, if applicable

Files to attach to the support ticket:

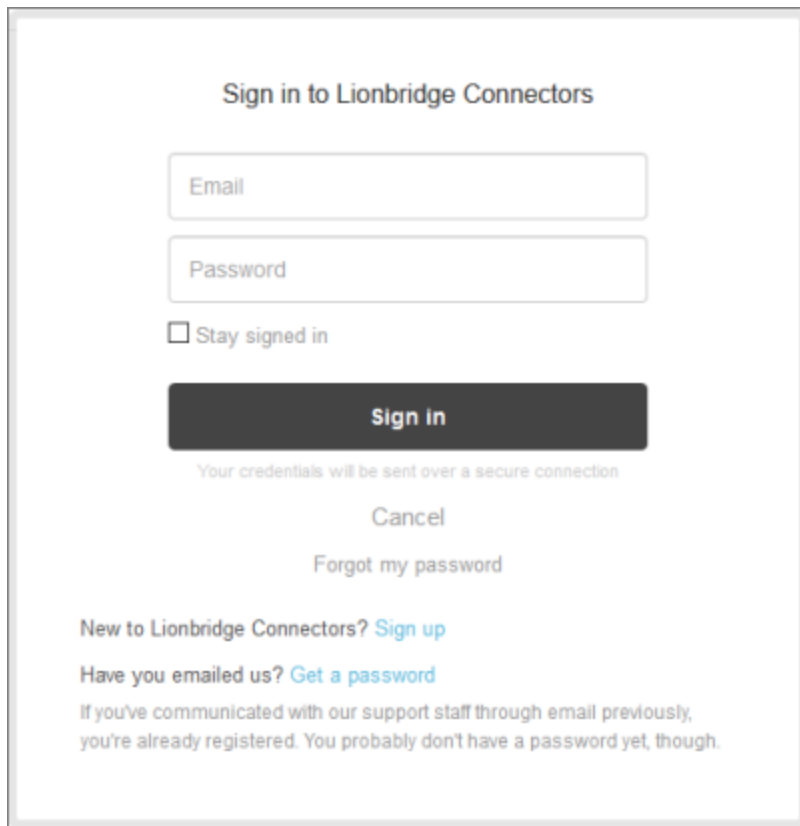

- CMS log files for the date the issue occurred
- log files for the date the issue occurred
- screen capture of the issue

To view and update your support ticket in Zendesk:

Important: You must log into Zendesk to view your support tickets there.

1. Open the Lionbridge Connectors Zendesk page in your browser: <https://connectors.zendesk.com>.
2. In the top-right corner, click **Sign in**, and enter your credentials.

Note: If you do not have sign-in credentials yet, then click either **Sign up** or **Get a password**, and follow the onscreen instructions.

The screenshot shows a sign-in form for Lionbridge Connectors. At the top, the title is "Sign in to Lionbridge Connectors". Below the title are two input fields: "Email" and "Password". Under the "Password" field is a checkbox labeled "Stay signed in". A large, dark "Sign in" button is centered below the checkbox. Below the button, a small note states "Your credentials will be sent over a secure connection". Further down are the links "Cancel" and "Forgot my password". At the bottom, there are two links: "New to Lionbridge Connectors? Sign up" and "Have you emailed us? Get a password". A final note at the bottom reads: "If you've communicated with our support staff through email previously, you're already registered. You probably don't have a password yet, though."

3. After signing in, click **My activities** to view the tickets you opened or where you are cc'd.
4. To update tickets, you can reply or attach files.

For more information, refer to "Submitting and tracking support requests" in Zendesk's *Help Center guide for end-users*, at: <https://support.zendesk.com/hc/en-us/articles/203664386-Help-Center-guide-for-agents-and-end-users>.

Important: Zendesk refers to a *support ticket* as a *support request*. These terms are interchangeable.

2 Before You Install

Before you begin to install the Lionbridge Connector ("Connector") for Hybris, please review the system requirements, described below, and perform the following pre-installation procedures:

1. "[Setting Your System Date, Time, and Time Zone Correctly](#)" on page 10.
2. Ensure that in your Hybris environment, the Hybris suite user has sufficient access rights to control job execution in Hybris via `CronJobs`. For detailed instructions, refer to the appropriate version of the Hybris documentation at <https://wiki.hybris.com>.

2.1 System Requirements

The Lionbridge Connector for Hybris ("Connector") supports Hybris versions 6.1 and higher. The Connector has several pre-installation requirements, described in "[Before You Install](#)" on page 10.

The Connector requires Java 8.

The Connector has no additional hardware or software requirements beyond those of Hybris. For detailed requirements, refer to the appropriate version of the Hybris documentation at <https://wiki.hybris.com>.

Memory	16 GB minimum is recommended by Hybris. This is recommended for the Connector to function as expected.
Disk Space	<ul style="list-style-type: none"> ■ 5 GB is recommended by Hybris. ■ The Connector installation requires extensions of 170 MB. ■ Space for storing log files.

2.2 Setting Your System Date, Time, and Time Zone Correctly

The Lionbridge Connector sends content to and receives content from the Clay Tablet Platform, which is hosted in the Amazon Web Services (AWS) environment. AWS requires any machines that connect to its applications to have the correct system time and date settings.

Important: Before proceeding, ensure that the system date, time, and time zone are set correctly on any systems that will run the Lionbridge Connector. If these settings are incorrect, the following error message is displayed: `Error. The difference between the request time and the current time is too large.`

3 Installing the Lionbridge Connector

This section describes how to install the Connector installation package into your Hybris system.

Before you install the Connector, verify that you have reviewed the system requirements and performed the pre-installation tasks described in ["Before You Install"](#) on page 10.

To install the Connector into Hybris:

1. Download the Lionbridge Connector ("Connector") delivery package, from the link that Lionbridge sends you.

2. Unzip the delivery package into any working folder on your server.

3. If the `${HYBRIS_BINDIR}/custom` folder does not already exist, then create it, for example:

- In Windows: `C:\hybris\bin\custom`.

- In Unix: `$HYBRIS_HOME/bin/custom`.

4. Copy all the Connector packages in the delivery package to the `custom` folder, for example:

- In Windows:

- `C:\hybris\bin\custom\ctbackoffice`
- `C:\hybris\bin\custom\ctbasecockpit`
- `C:\hybris\bin\custom\ctcockpit`
- `C:\hybris\bin\custom\ctcore`
- `C:\hybris\bin\custom\ctwcms`

- In Unix:

- `$HYBRIS_HOME/bin/custom/ctbackoffice`
- `$HYBRIS_HOME/bin/custom/ctbasecockpit`
- `$HYBRIS_HOME/bin/custom/ctcockpit`
- `$HYBRIS_HOME/bin/custom/ctcore`
- `$HYBRIS_HOME/bin/custom/ctwcms`

5. If the Hybris server is running, then stop it.

- In Windows:

- a. Open the **Command Prompt** window in which the server is running.
- b. Press `Ctrl` and `C`.

- In Unix: In the Terminal, press `Ctrl` and `C`.

6. In the `${HYBRIS_CONFIGDIR}/localextensions.xml` file, add the following entries for the new extensions:

```
<extension name="ctbackoffice"/>
<extension name="ctbasecockpit"/>
<extension name="ctcockpit"/>
<extension name="ctcore"/>
```

```
<extension name="ctwcms"/>
```

For example, add this entry to the following file:

■ In Windows: `C:\hybris\config\localextensions.xml`.

■ In Unix: `$HYBRIS_HOME/config/localextensions.xml`.

7. Navigate to the `${HYBRIS_BINDIR}/platform` directory, for example:

■ In Windows: `C:\hybris\bin\platform`.

■ In Unix: `$HYBRIS_HOME/bin/platform`.

8. Do one of the following:

■ In Windows:

- Press the `Shift` button and right-click, and select **Open command window here** from the context menu.

The Command Prompt window opens.

- Type `setantenv.bat` and press `Enter`.

■ In Unix: In the Terminal, type `./setantenv.sh` and press `Enter`.

9. After setting ant home, type `ant clean all` and press `Enter`.

This takes a few minutes to run. When it is finished, `BUILD SUCCESSFUL` is displayed in the Terminal, along with the build time.

10. Do one of the following to start the Hybris server, so that you can deploy the Connector:

■ In Windows: In the **Command Prompt** window, type `hybrisserver.bat` and press `Enter`.

■ In Unix: In the Terminal, type `hybrisserver.sh` and press `Enter`.

This takes a few minutes to run.

11. Update the Hybris suite.

- Open the Hybris **Administration Console** in a browser, at `http://localhost:9001`.

- Mouseover the **Platform** tab.

- Click the **Update** menu item.

The **Update** page opens.

Note: If you are updating from a previous version of the Connector, scroll down, and clear the **Create essential data** and **Localize types** check boxes.

- Click the **Update** button to start updating Hybris with the Connector.

This takes a few minutes to run.

12. When it is done, scroll down to the bottom of the page.

The console displays `FINISHED`, along with the updating time.

For more information about updating the Hybris suite, see:

<https://wiki.hybris.com/display/release5/Initializing+and+Updating+the+hybris+Commerce+Suite>.

4 Configuring the Lionbridge Connector

After you install the Connector, you configure your Connector installation in Hybris Backoffice.

To configure the Connector:

1. In your Web browser, navigate to `/backoffice/` on your Hybris instance.
2. Log in to the Hybris Backoffice.
3. In the **Administration** menu, select **ConnectorConfig**.
4. In the secondary **ConnectorConfig** menu that opens, select **System Configuration**.
5. Configure the settings in the following sections:

Section	Detailed Configuration Instructions
Lionbridge License	"Setting Up Your Connector License" on page 15
Add LSP	"Adding your Translation Provider (LSP)" on page 15
Connector Configurations–Translation Settings	"Configuring Translation Settings" on page 18
Connector Configurations–Language Mapping	"Mapping Language Codes" on page 19
Connector Configurations–Network Settings	"Configuring Proxy Server Implementations" on page 21

6. In the **ConnectorConfig** menu, select **Content Mapping** to open the Content Mapping page.
 - In the **Item Type Attributes** tab, you configure the localized `Item Type` attributes of Hybris business objects and sub-types to send out for translation. For detailed instructions, see ["Configuring Hybris Business Objects, Sub-Types, and Localized Attributes"](#) on page 23.
 - Optional. In the **Classification Attributes** tab, you can configure the product classification attributes of Hybris objects that are *Products* for the Connector to send for translation. All classification attributes belong to a category. When you add a product to a category, Hybris attaches those attributes to it. For detailed configuration instructions, see ["Configuring Product Classification Attributes for Translation"](#) on page 27.
7. Optional. In Hybris versions 6.1 or 6.2, you can configure the multi-select feature to support sending multiple products and pages for translation concurrently from the Hybris Backoffice. For detailed instructions, see ["Configuring the Multi-Select Feature in Hybris"](#) on page 29.

Note: This step is not relevant for Hybris versions 6.3 or higher.

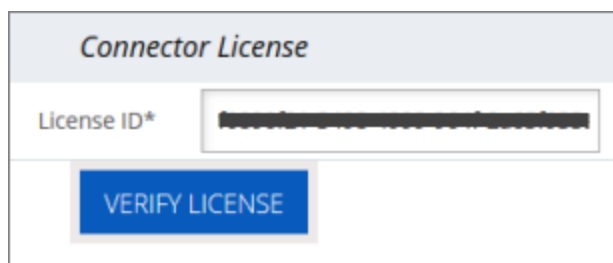

Important: You must configure your browser to allow pop-up windows on the Hybris server.

4.1 Setting Up Your Connector License

You set up your Connector license in the **Connector License** section of the **System Configuration** page.

To set up your Connector license:

1. Open the **System Configuration** page. For detailed instructions, see "[Configuring the Lionbridge Connector](#)" on page 14.
2. In the **Connector License** section of the **System Configuration** page, in the **License ID** field, enter your Connector license key, which you obtain from Lionbridge.

A screenshot of a web form titled "Connector License". It features a text input field labeled "License ID*" containing a long alphanumeric string. Below the input field is a blue button with the text "VERIFY LICENSE".

3. Click **Verify License**.

A message box opens, stating that the license was successfully verified.

Note: The Connector always initiates calls to the Clay Tablet Platform. However, the CMS address keys enable establishing a secure, discrete connection between the Connector instance and the Platform. The Connector uses the CMS address key to move the files your company exports from Hybris to the Clay Tablet Platform. The Platform then forwards your exported files to your translation provider. The CMS address keys also support the return of files from translation. If you have multiple Hybris installations, there must be one key for each environment.

Very important: Do not copy the CMS address keys to multiple hybris instances, because this is a violation of the License Agreement. Using the same CMS address keys on multiple hybris instances will cause the Connector to behave unexpectedly, which can result in lost translation content, orphaned projects, and inaccurate translation status reports. Clay Tablet will support technical issues caused by duplicating or incorrectly installing CMS address keys only on a time and materials basis.

4.2 Adding your Translation Provider (LSP)

You set up your translation provider (LSP) in the **Add LSP** section of the **System Configuration** page.

To add your translation provider:

1. Open the **System Configuration** page. For detailed instructions, see "[Configuring the Lionbridge Connector](#)" on page 14.

2. In the **Add LSP** section of the **System Configuration** page, enter the following information:

The screenshot shows a form titled "Add LSP" with three input fields: "LSP Name*" (text box), "Access Key*" (dropdown menu), and "Type*" (dropdown menu). The "Type*" dropdown is currently set to "Generic". Below the fields are two blue buttons: "TEST LSP" and "ADD LSP".

- **LSP Name:** Your company's name for the translation provider (LSP). This is what your users will select when sending out content for translation to this provider.
- **Access Key:** Clay Tablet provides access keys for you to map to your LSPs (translation providers). Select a key to access a specific translation provider. The list of available keys is populated after you verify your license, as described in "[Setting Up Your Connector License](#)" on page 15.
- **Type:** Select your translation provider. If your translation provider is not displayed, then select *Generic*. The type of translation provider determines whether additional configuration is required. This is one of the following:
 - **Lionbridge Freeway:** Select this for the Lionbridge Freeway translation provider. This option requires additional information. If you select this, the section of the page expands to display additional fields:

This screenshot shows the "Add LSP" form with "Freeway" selected in the "Type*" dropdown. The form is expanded to show additional fields: "Server*" (text box), "User*" (text box with "admin" entered), "Password*" (password field with six dots), "Auth URL" (text box), and "Service URL" (text box). The "TEST LSP" and "ADD LSP" buttons are still present at the bottom.

- **Server:** The hostname of the Lionbridge Freeway server, for example, `example.lionbridge.com`.
 - **User:** The username for logging into the Lionbridge Freeway server.
 - **Password:** The password for logging into the Lionbridge Freeway server.
 - **Auth URL:** Optional. The URI where the Connector receives an authentication token for Lionbridge Freeway.
 - **Service URL:** Optional. The URI where the Connector can request a list of Lionbridge Freeway analysis codes.
- ☰ **Lionbridge onDemand:** Select this for the Lionbridge On Demand translation provider. This option requires additional information. If you select this, the section of the page expands to display additional fields:

The screenshot shows a web form titled "Add LSP". It contains the following fields and controls:

- LSP Name*:** A text input field.
- Access Key*:** A dropdown menu.
- Type*:** A dropdown menu with "Lionbridge onDemand" selected.
- Web Content Service ID*:** A text input field.
- Product Content Service ID*:** A text input field.
- Purchase Order:** A text input field.
- TEST LSP:** A blue button.
- ADD LSP:** A blue button.

- **Web Content Service ID:** The onDemand service ID, which identifies the onDemand service for translating Web content, for example: `MT`. This is the content sent for translation from the Hybris WCMS Cockpit.
 - **Product Content Service ID:** The onDemand service ID, which identifies the onDemand service for translating product content, for example: `pseudo translate`. This is the content sent for translation from the Hybris Product Cockpit.
 - **Purchase Order:** Your company's onDemand purchase order is required for quoting and billing.
- ☰ **Generic:** Select this if the translation provider is not Lionbridge onDemand or Lionbridge Freeway. No additional fields are displayed.

3. Click **Test LSP** to test the settings for your translation provider.

4. Click **Add LSP**.

The list at the bottom of the section now displays the translation provider (LSP) you just added.

Name	Access Key	Type
dev demo	hybris-dev-demo-producer	Generic
mktests	mk-qa-hybris-producer2	Generic
MKtestFW	mk-qa-hybris-producer	Freeway

4.3 Configuring Translation Settings

In the **Translation Settings** section of the **System Configuration** page, you configure the following settings:

- the maximum number of items in a translation file
- how frequently to download and import translations

Configuring the maximum number of items in a job

An *item* is an asset that is being translated into a specific target language.

For example, if you are translating 100 assets from one source language into three target languages, then there are 300 items. If you use the default value of 100, then only the first 100 items will be included in the job.

By default, the maximum number of items that the Connector sends out for translation in a single translation file is 100. You can change this number in the **Maximum number of items per translation file** setting to 150, 200, or 250.

Configuring how frequently to download and import translations

The `ctPerformable CronJob` automatically downloads and imports translations from the Clay Tablet Platform into Hybris. By default, this CronJob runs once every minute.

This CronJob consumes resources such as memory space, network bandwidth, and database connections. Therefore, by design, the CronJob is active only when required, which is when the Connector submits a translation job and expects translated content to return from the Clay Tablet Platform. When the CronJob is active, it polls the Clay Tablet Platform to update the job status and retrieve any translated content.

At the start of each interval, the CronJob checks whether it is required to remain active. If it is not required, it de-activates internally. It automatically re-activates when there is a job to retrieve.

You can change this interval in the **Cron Job Interval (Minutes)** setting so that the CronJob runs every 5 or 10 minutes.

Note: If the Clay Tablet Platform is waiting for a message about translated content for a submitted job, and a network outage prevents this message from being delivered, the CronJob keeps polling the Clay Tablet Platform until the job is manually stopped.

Tip: You can temporarily prevent this job from running and consuming resources, for example, if you are not currently sending out content items for translation. For detailed instructions, refer to the appropriate version of the Hybris documentation at <https://wiki.hybris.com>.

To change one or both of these settings:

1. Open the **System Configuration** page. For detailed instructions, see "[Configuring the Lionbridge Connector](#)" on page 14.
2. Locate the **Translation Settings** section of the **System Configuration** page.

Tip: Depending on your screen size and resolution, you may need to scroll down to view this section.

3. In the **Maximum number of items per translation file** list, select one of the following numbers: 100, 150, 200, or 250.
4. In the **Cron Job Interval (Minutes)** list, select one of the following intervals, in minutes: 1, 5, or 10.
5. Click **Save Translation Settings**.

Note: Saving these settings creates and registers the `ctPerformable` CronJob with the interval you specified.

4.4 Mapping Language Codes

You map Hybris language codes to Clay Tablet language codes in the **Language Mapping** section of the **System Configuration** page.

You must map the Hybris language codes to the Clay Tablet language codes for the source and target languages that you will use for translation. Otherwise, then Connector will not send out content for translation.

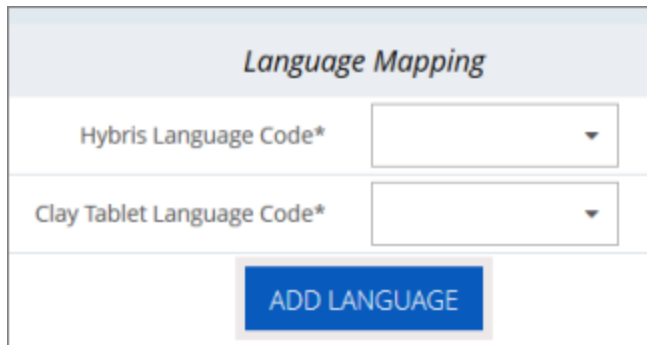

For a list of Clay Tablet language codes, see "[Appendix: Language Codes](#)" on page 31.

To map language codes:

1. Open the **System Configuration** page. For detailed instructions, see "[Configuring the Lionbridge Connector](#)" on page 14.

2. Locate the **Language Mapping** section of the **System Configuration** page.

Tip: Depending on your screen size and resolution, you may need to scroll down to view this section.

<i>Language Mapping</i>	
Hybris Language Code*	<input type="text"/>
Clay Tablet Language Code*	<input type="text"/>
ADD LANGUAGE	

3. Perform the following steps for each language to map:
 - a. In the **Hybris Language Code** list, select the Hybris language code to map.

Tip: Languages that are already mapped are displayed in gray with a gray background. Languages that are not currently mapped are displayed in black with a white background.

- b. In the **Clay Tablet Language Code** list, select the corresponding Clay Tablet language code to map.
- c. Click **Add Language**.

The list at the bottom of the section now displays the mapping you just added.

Language Mapping

Hybris Language Code*

Clay Tablet Language Code*

ADD LANGUAGE

Hybris Language Code	Clay Tablet Language Code	
de	de-DE	
pt	pt-BR	
ja	ja	
en	en-US	
es_CO	es-CO	
it	it-IT	
fr	fr-FR	
es	es-ES	

Tip: To delete a language mapping, click the corresponding Delete button .

4.5 Configuring Proxy Server Implementations

You can configure proxy server implementations of the Connector in the **Network Settings** section of the **System Configuration** page.

To configure a proxy server:

1. Open the **System Configuration** page. For detailed instructions, see "[Configuring the Lionbridge Connector](#)" on page 14.
2. Locate the **Network Settings** section of the **System Configuration** page.

Tip: Depending on your screen size and resolution, you may need to scroll down to view this section.

The screenshot shows a dialog box titled "Network Settings". At the top, there is a dropdown menu labeled "Use Proxy Server*" with the value "No" selected. Below the dropdown is a blue button labeled "SAVE NETWORK SETTINGS".

- In the **Use Proxy Server** dropdown list, select **Yes**.

The section expands.

The screenshot shows the "Network Settings" dialog box expanded. The "Use Proxy Server*" dropdown is now set to "Yes". Below it are several input fields: "Host*" with the value "1.1.1.1", "Port*" with the value "333", "User", "Password", and "NTLM Domain". At the bottom, there are two blue buttons: "TEST PROXY SETTINGS" and "SAVE NETWORK SETTINGS".

- Edit the following information:

Field	Description
Host	Required. The IP address or domain name for the proxy server.
Port	Required. The port number for the proxy server.
User	Optional. The username for authentication to the proxy server.
Password	Optional. The password for authentication to the proxy server.
NTLM Domain	Optional. The domain for authentication to the proxy server.

5. Click **Test Proxy Settings**.
6. If the test is successful, click **Save Network Settings**.

4.6 Configuring Attributes for Translation

There are two ways to configure Hybris business objects, sub-types, and localized attributes for translation:

- For *all* Hybris objects and sub-types in those objects, you can configure which localized `Item Type` attributes the Connector will send for translation, as described in "[Configuring Hybris Business Objects, Sub-Types, and Localized Attributes](#)" on page 23.
- For Hybris object that are *Products*, you can configure the product classification attributes that the Connector will send for translation. All classification attributes belong to a category. When you add a product to a category, Hybris attaches those attributes to it. For more information about this Hybris feature, refer to the Hybris classification documentation at: <https://help.hybris.com/6.4.0/hcd/8b7aa49c86691014ae51c3b0d38cd87b.html>. For Connector configuration instructions, see "[Configuring Product Classification Attributes for Translation](#)" on page 27.

4.6.1 Configuring Hybris Business Objects, Sub-Types, and Localized Attributes

In the **Content Mapping** page, you can configure which Hybris business objects (objects) and localized attributes and sub-types in those objects the Connector will send for translation. The **Mapped Content** section, on the right side of that page, displays all configured Hybris objects, localized attributes, and sub-types, including localized attributes of sub-types.

Important: You can configure only *localized* attributes for the Connector. If there are attributes you want to send out for translation that are not localized by default, you must configure them to be localized. For detailed instructions, refer to "Localized Attributes" in the *Internationalization and Localization Overview* in the Hybris documentation, available at: <https://help.hybris.com/6.3.0/hcd/8bfc204086691014a345f64b08505839.html>.

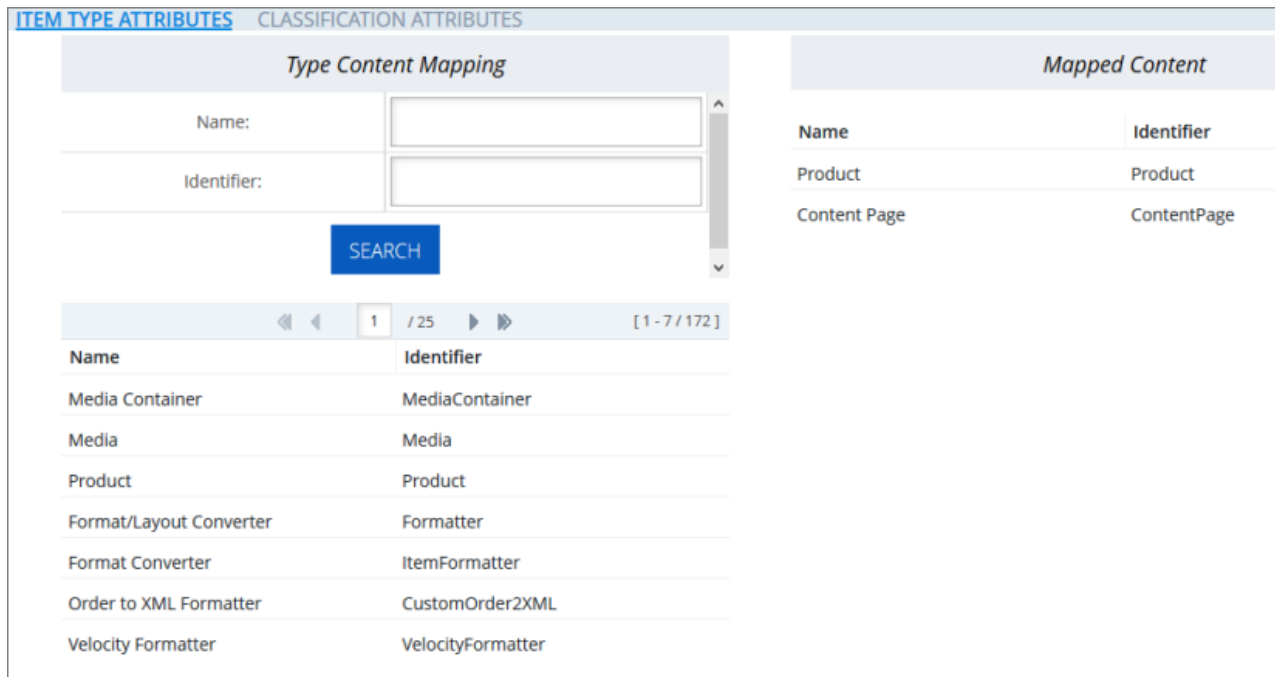

Note: In exceptional cases, configuring certain Hybris business objects and localized attributes, as described below, may not be sufficient to support the Connector sending them out for translation, and custom code may be required.

Tip: To translate content slot components, such as `CMSParagraphComponent`, you must map them.

To configure a localized attribute of a Hybris business object or sub-type so that the Connector can send it out for translation:

1. In your Web browser, navigate to `/backoffice/` on your Hybris instance.
2. Log in to the Hybris Backoffice Cockpit.
3. In the **Administration** menu, select **ConnectorConfig**.

The **Item Type Attributes** tab of the **Content Mapping** page opens.

- The **Type Content Mapping** section on the left side of the tab displays all the available Hybris objects and sub-types.
- The **Mapped Content** section, on the right side of the tab, displays all Hybris objects and sub-types, and their corresponding attributes, that have already been mapped.

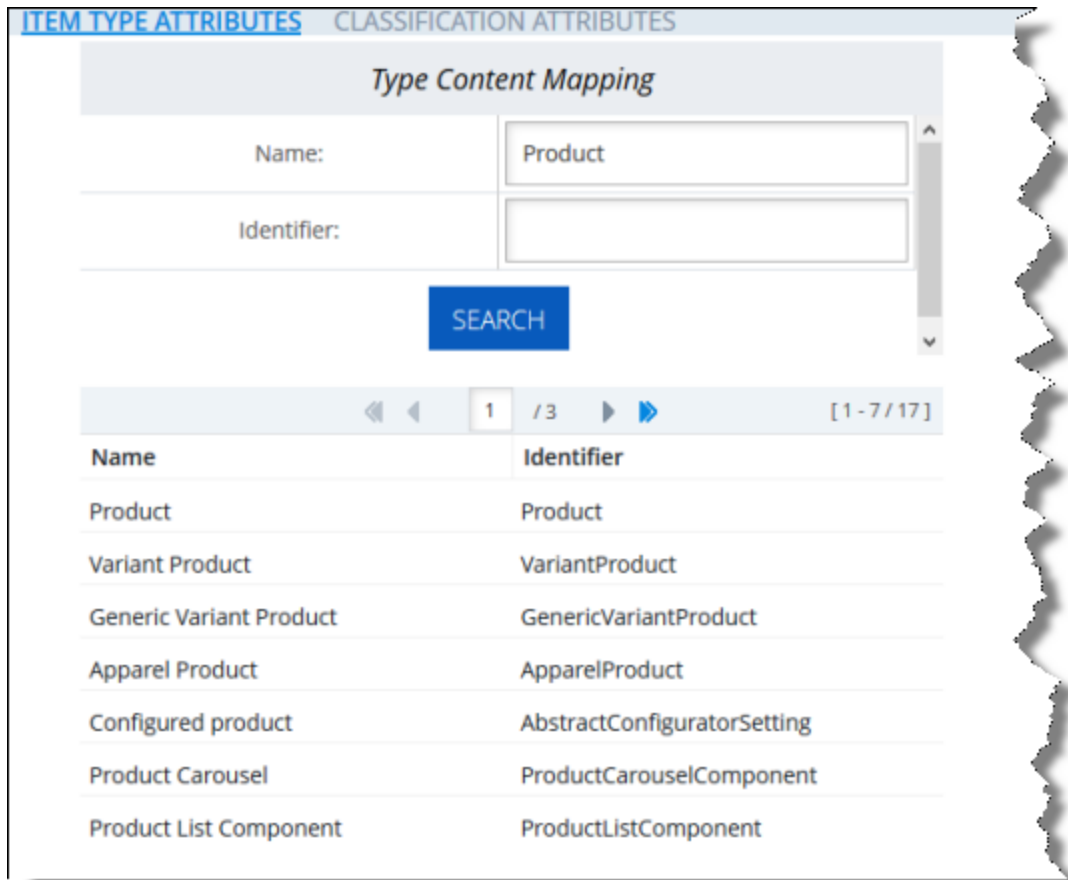

The section footers display the total number of items in each list, and the total number of items displayed on this sub-page of the list.

- If there are more than seven items in the **Type Content Mapping** section, they are displayed in multiple sub-pages.
- If there are more than twelve items in the **Mapped Content** section, they are displayed in multiple sub-pages.

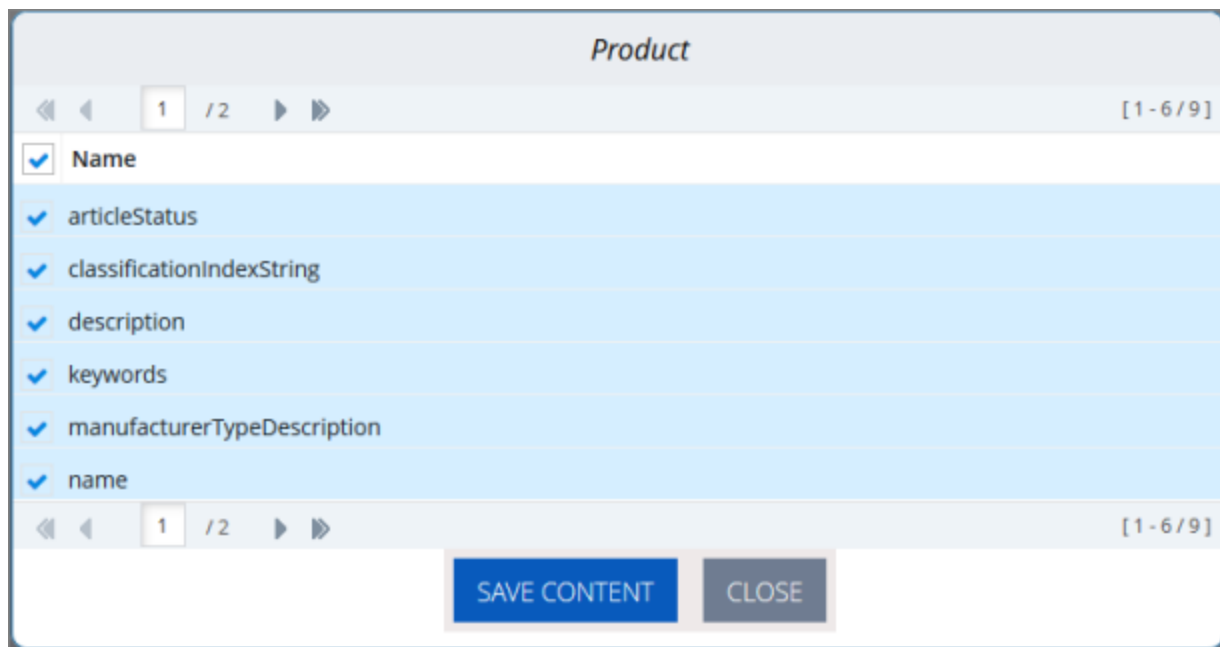

Tip: Use the sub-page navigation arrows to navigate between sub-pages. To navigate among sub-pages, at the bottom of the list, click an arrow or enter the number of the sub-page to display.

4. In the **Type Content Mapping** section of the page, use the **Name** and/or **Identifier** fields at the top of the section to search for the Hybris object or sub-type you want to be available for translation, and then click **Search**.

The list below the **Search** button updates with the search results. For example, if you searched for objects with the name `Product`, the list displays all matching results, which are objects or sub-types with `Product` in their name.

5. In the search results, click the row for the Hybris business object or sub-type to map.
A dialog box opens, displaying the object's or sub-type's localized attributes. The title of the dialog box is the object or sub-type.

6. Configure the localized attributes for translation.
 - a. Select the check boxes for the localized attributes to configure for translation.

Tip: To select all check boxes, click the check box in the **Name** column header.

- b. Click **Save Content**.
A message box states that the selected localized attributes were successfully saved.
 - c. Click **OK** to close the message box.

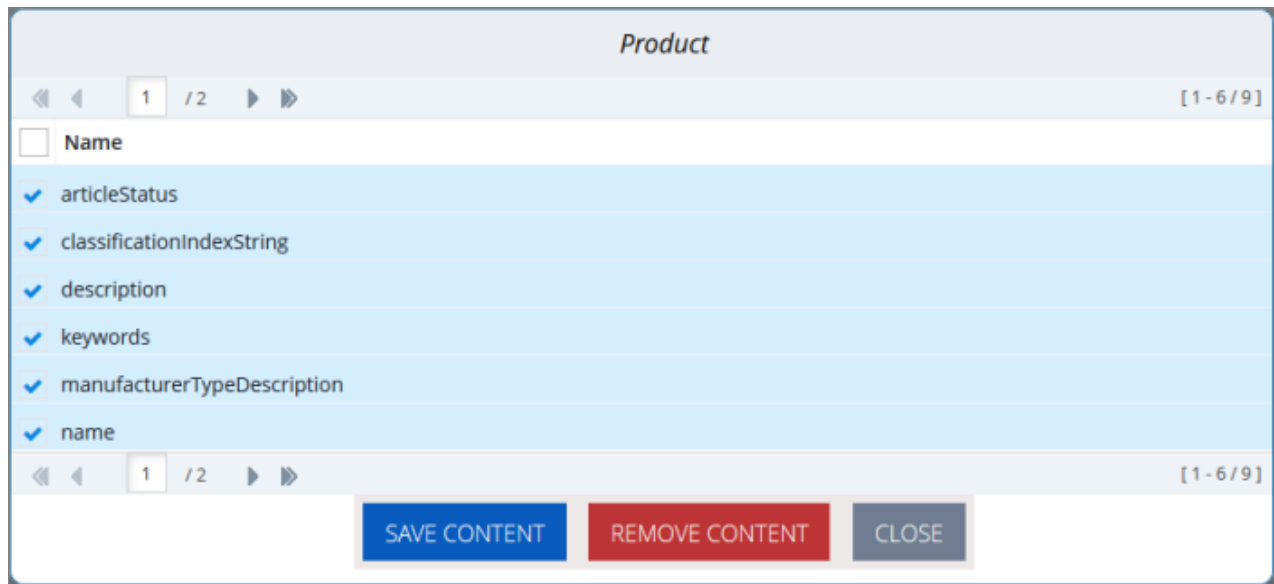

Note: Use the above steps to add additional localized attributes to a previously configured Hybris business object or sub-type.

To edit or delete configured Hybris business objects or sub-types:

1. In your Web browser, navigate to `/backoffice/` on your Hybris instance.
2. Log in to the Hybris Backoffice Cockpit.
3. In the **Administration** menu, select **ConnectorConfig**.
The **Content Mapping** page opens. The **Mapped Content** section on the right side of the page displays all the previously configured Hybris business objects and sub-types.
4. Locate the configured Hybris business object to edit or delete, and click the corresponding row.

Tip: Use the sub-page navigation arrows to navigate between sub-pages. To navigate among sub-pages, at the bottom of the list, click an arrow or enter the number of the sub-page to display.

A dialog box opens. The title of the dialog box is the object or sub-type.

Tip: Use the sub-page navigation arrows to navigate between sub-pages. To navigate among sub-pages, at the bottom of the list, click an arrow or enter the number of the sub-page to display.

5. Do one of the following:

- To edit the localized attributes to configure for translation, select or clear the appropriate check boxes, and then click **Save Content**.

A message box states that the configuration was saved.

- To remove the object or sub-type from configuration for translation, click **Remove Content**.

A message box states that the item was deleted.

4.6.2 Configuring Product Classification Attributes for Translation

For Hybris object that are *Products*, you can configure the product classification attributes that the Connector will send for translation. All classification attributes belong to a category. When you add a product to a category, Hybris attaches those attributes to it. For more information about this Hybris feature, refer to the Hybris classification documentation at:

<https://help.hybris.com/6.4.0/hcd/8b7aa49c86691014ae51c3b0d38cd87b.html>.

To configure product classification attributes for translation:

- In your Web browser, navigate to `/backoffice/` on your Hybris instance.
- Log in to the Hybris Backoffice Cockpit.
- In the **Administration** menu, select **ConnectorConfig**.

The **Item Type Attributes** tab of the **Content Mapping** page opens.

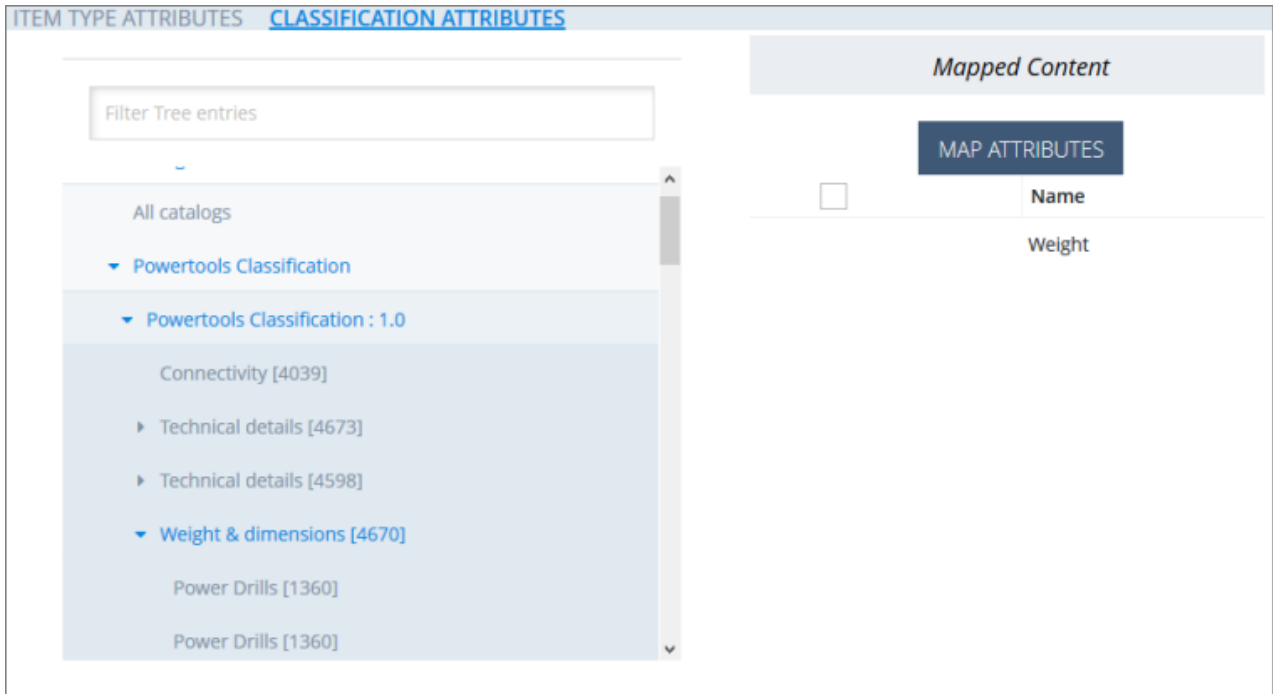

- 4. Click the **Classification Attributes** link in the top of the page to open the corresponding tab.

- 5. In the **Filter Tree** in the left pane, navigate in the catalogs and classification to select a classifying category. For example, navigate to:

Powertools Classification classification system > Powertools Classification: 1.0 classification system version > Weight & Dimensions classifying category.

Note: In Backoffice, you can choose which classification to enable. For details, refer to the Hybris documentation, available at: <https://help.hybris.com>.

The **Mapped Content** pane on the right displays a list of classification attributes.

- 6. To map the classification attributes, so that the Connector can send them out for translation, select the corresponding check box, or to select all classification attributes of the classifying category, select the check

box in the column header. For example, select the `Weight` check box.

7. Click **Map Attributes**.

A message box confirms that the configuration was saved.

8. Click **OK** to close the message box.

9. Repeat steps 5 through 8 for all the classification attributes to configure for translation.

4.7 Configuring the Multi-Select Feature in Hybris

In Hybris versions 6.1 and 6.2, if you want to select multiple products and website pages ("pages") for translation concurrently in the Hybris Backoffice, you must enable the multi-select feature by configuring the `multiSelect` setting. This feature is enabled by default in Hybris versions 6.3 and higher.

For detailed instructions, refer to *Enable-multi-select Attribute* in the Hybris documentation, available at: <https://help.hybris.com/6.3.0/hcd/8b80155586691014b8a180a42610cdbc.html>.

Note: Selecting products for translation *from the Hybris Backoffice* is supported only for Hybris versions 6.4 and higher.

5 Pre-Production Testing

After you complete the configuration, your Lionbridge Connector for Hybris installation is ready for testing. We recommend sending only a few pages for translation in one language as an initial test. For detailed instructions, refer to the *Lionbridge Connector for Hybris User Guide*. Once successful, you can send as many languages as required.

Please coordinate with your translation provider for this test process.

If you have any concerns or questions, please contact Lionbridge Connector Support. For details, see "[How to Contact Lionbridge Connector Support](#)" on page 7.

6 Appendix: Language Codes

For detailed instructions on mapping Hybris languages to Clay Tablet languages, see "[Mapping Language Codes](#)" on page 19.

The Lionbridge Connector has the following language codes:

Language Identifier	Language Code
Afrikaans	"af-ZA"
Albanian	"sq-AL"
Amharic	"am-ET"
Arabic_Algeria	"ar-DZ"
Arabic_Bahrain	"ar-BH"
Arabic_Egypt	"ar-EG"
Arabic_Iraq	"ar-IQ"
Arabic_Jordan	"ar-JO"
Arabic_Kuwait	"ar-KW"
Arabic_Lebanon	"ar-LB"
Arabic_Libya	"ar-LY"
Arabic_MiddleEast	"ar-XR"
Arabic_Morocco	"ar-MA"
Arabic_Oman	"ar-OM"
Arabic_Qatar	"ar-QA"
Arabic_Saudi_Arabia	"ar-SA"
Arabic_Syria	"ar-SY"
Arabic_Tunisia	"ar-TM"
Arabic_UAE	"ar-AE"
Arabic_Yemen	"ar-YE"
